## EP Plenary Vote on the reduction of the impact of certain plastic products on the environment

### PlasticsEurope calls for Clearer Rules

PlasticsEurope supports policy makers' joint efforts to put policies in place to reduce marine litter. However, we are concerned that the measures voted today will end up being unworkable and will risk hindering the proper implementation and enforcement of the Directive by leaving the door open to endless interpretations by national regulators and waste operators and by generally blurring the market.

With regards to the **definitions** for 'plastic' and 'single use plastic product' and some of the **categories**, we consider that they remain **ambiguous**. This will lead to problems in interpretation and implementation at national level with the consequence of the internal market being fragmented.

We are also concerned that the measures adopted are disproportionate. Bans are not the solution. They will discourage investments that are crucial to further develop technologies and infrastructure to recycle plastics. The root causes of marine litter are improper waste management, a lack of awareness and littering behaviour: these are independent of material type. Moreover, producers are doing their share to tackle these problems by financing EPR schemes. However, they do not have the means to solve the litter problem alone. It is only with the help of other stakeholders, including private or public waste operators and local authorities, that plastics manufacturers can take action in order to find workable solutions.

We consider that the speed of the process did not allow enough time for a complete life cycle assessment of alternatives. Additionally, we consider it essential, for the purpose of this Directive, to limit its scope to the most problematic product categories, as supported by the evidence provided in the [JRC report](#) and regardless of the polymer used. Singling out specific polymers, such as food and beverage containers made of expanded polystyrene (EPS) is discriminatory and in the case of EPS, not supported by the evidence provided in the JRC report.

---

#### Editors' note

PlasticsEurope is one of the leading European trade associations with centres in Brussels, Frankfurt, London, Madrid, Milan and Paris. We are networking with European and national plastics associations and have more than 100 member companies, producing over 90% of all polymers across the EU28 member states plus Norway, Switzerland and Turkey. The European plastics industry makes a significant contribution to the welfare in Europe by enabling innovation, creating quality of life to citizens and facilitating resource efficiency and climate protection. More than 1.5 million people are working in approximately 60,000 companies (mainly small and medium sized companies in the converting sector) to create a turnover above 340 bn EUR per year. The plastics industry includes polymer producers - represented by PlasticsEurope, converters - represented by EuPC - and machine manufacturers - represented by EUROMAP. For further info see the web links: [www.plasticseurope.org](http://www.plasticseurope.org), [www.plasticsconverters.eu](http://www.plasticsconverters.eu), [www.euromap.org](http://www.euromap.org)

PlasticsEurope calls for a Directive in line with its original scope to reduce marine litter based on the top ten categories included in the JRC reports.

Commenting after the plenary vote, Karl-H. Foerster, Executive Director of PlasticsEurope, said: "We trust that the upcoming trilogue discussions will bring about further changes to the text so that these objectives are met."
